

Prisma vs GORM vs Mongoose CRUD Methods

This document provides a clean comparison of commonly used CRUD and query methods in Mongoose, Prisma, and GORM.

Operation	Mongoose	Prisma	GORM
Create One	<code>create()</code>	<code>create()</code>	<code>Create()</code>
Create Many	<code>insertMany()</code>	<code>createMany()</code>	<code>Create()</code>
Find All	<code>find()</code>	<code>findMany()</code>	<code>Find()</code>
Find One	<code>findOne()</code>	<code>findUnique()</code> / <code>findFirst()</code>	<code>First()</code>
Find By ID	<code>findById()</code>	<code>findUnique()</code>	<code>First()</code>
Update One	<code>updateOne()</code>	<code>update()</code>	<code>Update()</code>
Update Many	<code>updateMany()</code>	<code>updateMany()</code>	<code>Updates()</code>
Find & Update	<code>findOneAndUpdate()</code>	<code>update()</code>	<code>Updates()</code>
Delete One	<code>deleteOne()</code>	<code>delete()</code>	<code>Delete()</code>
Delete Many	<code>deleteMany()</code>	<code>deleteMany()</code>	<code>Delete()</code>
Find & Delete	<code>findOneAndDelete()</code>	<code>delete()</code>	<code>Delete()</code>
Count	<code>countDocuments()</code>	<code>count()</code>	<code>Count()</code>
Exists	<code>exists()</code>	<code>findUnique()</code> / <code>findFirst()</code>	<code>First()</code>
Sort	<code>sort()</code>	<code>orderBy</code>	<code>Order()</code>
Limit	<code>limit()</code>	<code>take</code>	<code>Limit()</code>
Skip	<code>skip()</code>	<code>skip</code>	<code>Offset()</code>
Pagination	<code>skip()</code> + <code>limit()</code>	<code>skip</code> + <code>take</code>	<code>Offset()</code> + <code>Limit()</code>
Filter	<code>find({})</code>	<code>where</code>	<code>Where()</code>
Select Fields	<code>select()</code>	<code>select</code>	<code>Select()</code>
Populate Relation	<code>populate()</code>	<code>include</code>	<code>Preload()</code>
Aggregate	<code>aggregate()</code>	<code>groupBy()</code> / raw query	<code>Raw()</code> / <code>Joins()</code>
Transactions	<code>session()</code>	<code>\$transaction()</code>	<code>Transaction()</code>
Raw Query	<code>collection()</code>	<code>\$queryRaw()</code>	<code>Raw()</code>
Middleware/Hooks	<code>pre()</code> / <code>post()</code>	<code>middleware</code>	<code>hooks/callbacks</code>
Schema Validation	<code>schema validators</code>	<code>schema types</code>	<code>struct tags</code>
Auto Timestamps	<code>timestamps: true</code>	<code>@default(now())</code>	<code>gorm.Model</code>

Quick Notes:

- Mongoose is best for MongoDB applications.
- Prisma provides strong TypeScript support and excellent DX for SQL databases.
- GORM is popular in Go backend development with PostgreSQL/MySQL.
